INCIDENT-4471: EU_TECH_50 published below expectation

Date: 2026-02-11 **Severity:** P2 **Duration:** 14 minutes

Indices affected: EU_TECH_50 and two derived strategy indices

Summary

EU_TECH_50 published values approximately 1.2% below expectation from 09:02 to 09:16 CET. Peer indices sharing constituents were unaffected, which localised the problem to this index rather than to the feed or the calculation engine.

Timeline

Time (CET)	Event
08:47	Reference data batch completed. Spin-off for NTX.AS flagged PENDING_REVIEW, not APPROVED.
09:00	Market open. NTX.AS opened at the ex-distribution price.
09:02	First zscore_5m detector alert on EU_TECH_50.
09:04	Operations began investigating, initially suspecting a feed problem.
09:11	Peer comparison showed no equivalent deviation, ruling out the feed.
09:14	Divisor history query showed no adjustment applied for the NTX.AS spin-off.
09:16	Divisor manually adjusted; index values recalculated and republished.

Root cause

The spin-off corporate action was not applied to the divisor because it remained in PENDING_REVIEW status at the calculation cutoff. The constituent's price correctly reflected the distribution while the divisor did not, so the index absorbed the price drop as if it were a market move. The corporate action review queue had a single approver who was unavailable that morning.

Remediation

#	Action	Status
1	Alert on any corporate action in PENDING_REVIEW within 60 minutes of cutoff	Completed 2026-02-18
2	Second approver added to the corporate action review rota	Completed 2026-02-14
3	Peer-index comparison added as first step in anomaly triage runbook	Completed 2026-02-20
